**PROJECTS ON HTML5, CSS3, BOOTSTRAP, JAVASCRIPT AND JQUERY**

### 1) MouseMove Wheel
Wherever the user will click in the viewport with the mouse, the mouse-move event will be fired in which 4 different arbitrary co-ordinate positions will get the same center text duplicated in them. Only the font color will change for every co-ordinate position.

### 2) Gold Gym Website
It is a minimal promotional based responsive website of gym with different menu options in it, such as diets and nutrition, more details about workouts and exercises.

### 3) Random Quote Generator
It has fetched quotes which gets displayed when the user clicks on the button.

### 4) Box8-online food ordering and delivery website cloning
Clone of the home page of Box8 has been cloned in a similar fashion.

### 5) Basic Calculator
Google Calculator like operations.

### 6) Speech Synthesis
A voice over bot speaks the text that the user inputs in the input field. Supports customization of different combinations of speech and rate.

### 7) Coming Soon Template
Simple, responsive and appealing user experience coming soon page.

### 8) Graphical Password Authentication for Cloud Security
**Platform**: Java
**Technology**: Cloud Computing
**Description**: This project provides a secure system for the storage and access of cloud services Users can easily login into the system as it provides 3 level authentication scheme with textual, graphical and one time passwords with an option of uploading and downloading any type of files on the cloud which uses Centered Discretization and Persuasive cued click points. (PCCP).

### 9) Title: Bluetooth Chat Application
**Platform:** Android and Java
**Description:** It was a mini-project that deals as a messenger for android based phones. Via Bluetooth as the communication medium within a specified range, users can send messages to each other without the use of any Wi-Fi or internet access.
